Seattle Cancer Care Alliance

825 Eastlake Ave. E., Seattle, WA 98109-1023
206.606.1329

The Procedure Suite is on the 2nd floor of the clinic.

What is an endoscopic ultrasound?

Ultrasound is a scan that uses sound waves to create pictures of the inside of your body. In an endoscopic ultrasound, a special tool called an *endoscope* is used to help the doctor place the ultrasound probe as close as possible to the area being scanned.

An *endoscope* is a flexible tube about the width of a little finger. This tube is placed into your mouth and moved down into your esophagus, stomach, and small intestine. The tube will not get in the way of your breathing.

What to Expect

- You will receive a *sedative* (medicine to help you relax). This medicine will be given to you through a small tube called an *intravenous* (IV) line placed into one of your veins.
- Most people fall asleep. But, if you do not fall asleep and are feeling some discomfort, we will do our best to help you be comfortable.
- Your doctor may take small tissue samples called *biopsies*. You will not feel this because there are no nerve endings in that layer of tissue.
- This test will take only about 1 hour, but you will be in the hospital longer than that, to allow time for you to prepare for your EUS and recover afterward.

How do I get the test results?

When you wake up after the procedure, your doctor will talk with you about the results. If a biopsy was taken, or your results are not ready right after the EUS, we will tell you when you can expect to receive them.

Questions?

Your questions are important. Please call if you have questions or concerns. Weekdays between 8 a.m. and 5 p.m., call the clinic where your EUS is scheduled. After hours and on weekends and holidays, call the Community Care Line at Harborview, 206.744.2500.
