

Rehabilitation Medicine Outpatient Clinic

What to expect from the clinic

Most times, we are not prepared when a major illness or injury occurs. Dealing with the complex and long-term effects can be difficult and overwhelming.

The Rehabilitation Medicine Outpatient Clinic helps assess what has happened and plans the best course of action for your recovery.

What kinds of illnesses are treated in the clinic?

The Rehabilitation Medicine Outpatient Clinic offers a wide range of services to help patients cope with the complex and long-term effects of major illness or injury. We work with people who have had a stroke, spinal cord or brain injury, severe burns, or an amputation. We also work with patients who have cerebral palsy, multiple sclerosis, muscular dystrophy, post-polio complications, cancer-related disabilities, pain, and neurological disorders.

Medical services are provided by resident and attending doctors of the University of Washington Department of Rehabilitation Medicine. A certified rehabilitation nurse practitioner also provides evaluations and works closely with the attending physicians.

What services are offered at the clinic?

Management

Clinic staff can manage issues you have that are related to your disability, in a comprehensive way.

Follow-up

After completing an inpatient rehabilitation program, your doctor can monitor your progress as an outpatient at the clinic.

Assessment

Your readiness for inpatient rehabilitation programs can be assessed at the clinic.

Referral

When you are seen in the clinic, you can get referrals to outpatient physical therapy, occupational therapy, speech therapy, prosthetics and orthotics, assistive technology, and social work services.

Questions?

Call 206-598-4295

Your questions are important. Call your doctor or health care provider if you have questions or concerns. UWMC clinic staff are also available to help at any time.
