### Before Surgery Day

- **We will set up your follow-up visit for after surgery. This date may change, depending on your hospital stay.**

**Starting 7 to 14 days before surgery:**
- Walk 1 to 2 miles, or at least 30 to 60 minutes, every day.
- Plan for your ride to and from the hospital.
- If needed, talk with a social worker about your home healthcare needs and housing in the Seattle area (if you live more than 3 hours away from the hospital).
- If your surgeon told you to hold aspirin and NSAIDs (non-steroidal anti-inflammatory drugs) such as ibuprofen (Advil, Motrin) and naproxen (Aleve, Naprosyn), stop taking these 7 days before surgery.

**Starting 5 days before surgery:**
- Drink your Ensure Surgery or other supplement drink 3 times a day, and your regular meals.

**Starting 2 days before surgery:**
- Do not shave near the surgical areas.

**Day before surgery:**
- Receive a call from the hospital with your assigned arrival time. You must arrive 2 hours before your surgery begins.
- Start a clear liquid diet. Keep drinking clear liquids until 4 hours before you arrive at the hospital.
- If your surgeon told you to do a bowel prep, do so.
- **Before you go to bed**, take a shower:
  - Shower and shampoo with your regular soap.
  - Rinse well.
  - Wet a clean washcloth, then turn the shower off.
  - Pour 1/2 bottle of CHG soap on the washcloth. Use the washcloth to wash from your shoulders to your knees. Wash your groin crease, but not your private parts.
  - Leave the soap on your skin for 1 minute.
  - Rinse well.
- **Before midnight**, drink 8 ounces of apple juice.

### Surgery Day

**Before you leave home:**
- Take another shower using the same steps as last night.
- Do not apply deodorant, lotions, scents, or hair products after your shower.
- Pack your pre-op juice and post-op gum.

**2 hours before your surgery time:**
- Drink 8 ounces of apple juice.
  - If you are driving, allow time to drink the juice after you park at the hospital.
  - If you are not driving, we suggest you drink the juice as you arrive at the hospital.

**At the hospital:**
- Check in at Surgery Registration (Surgery Pavilion, 2nd floor) at your assigned arrival time.
- A nurse will take you to the pre-op area.
- An IV line will be placed in your arm to give you antibiotics and fluids.
- We will give you a heating blanket to keep you warm, improve healing, and lower infection risk.
- Your nurses will review your current medicines, and your doctors will review any updates to your health history.
- You will meet with your surgeons, who will answer any questions you may have.
- The Anesthesia team will talk with you about the anesthesia (sleeping medicine) you will receive during surgery. They may also explain an epidural catheter, if needed for pain control.
- The Anesthesiology team will take you to the operating room.
- We will take your family or friends to the waiting room.
- **During surgery, your doctors will inject Exparel (a numbing medicine) along your incision, if you do not have an epidural catheter. This will help control pain for 48 to 72 hours.**

**After surgery, you will:**
- Wake up in the recovery room. You will stay here for several hours.
- Move to your hospital room when you are awake and comfortable, and your vital signs are stable.

**You will have:**
- An IV in your arm to give you fluids and medicines.
- A patient-controlled analgesia (PCA/PCEA) pump so that you can give yourself pain medicine through your IV or epidural catheter, as needed.
- Leg wraps that fill with air from time to time, to help blood flow and lower the risk of blood clots.
- A Foley catheter (tube) in your bladder to drain urine. This catheter was placed during surgery.

**Your nurse will:**
- Help you sit up on the edge of your bed.
- Remind you to take sips of clear liquids and chew on ice chips and gum to get your digestion working.
- Teach you how to use an incentive spirometer (blue breathing device).
