Using a Theraband

Exercise #1
Shoulder Horizontal Abduction and Adduction

- Hold an end of the theraband in each hand.
- Place your hands together at chest level. Also keep your elbows at chest level.
- Pull your hands out to the sides, straightening your elbows.

These exercises using a theraband will help increase your strength for your daily living skills and prevent further injuries to your upper body.

Do each of these exercises:

_____ times
_____ times a day

Beginning

End
Exercise #2

Shoulder Flexion

- Hold an end of the theraband in each hand. Place your hands together on your lap.
- Keeping one hand in your lap, pull the other hand above your head, until your elbow straightens.
- Repeat with the other hand.

Exercise #3

Elbow Flexion

- Fold the theraband in half to shorten it. Hold one end in each hand.
- Place your hands together on your lap.
- Keeping 1 hand on your lap, touch your shoulder with other hand. Be sure to keep your elbow at your side as you do this.
- Repeat with the other hand.

Exercise #4

Elbow Extension

• Keep the theraband short.
• Place your hands together at chest level, keeping your elbows at your sides.
• Keeping 1 hand at your chest, pull straight down with the other.
• Repeat with the other hand.

Exercise #5

Elbow Extension in Adduction

• Unfold the theraband and hold one end in each hand.
• Place your hands by the sides of your head, with the theraband behind your head.
• Pull your hands out to the sides, keeping your arms at shoulder level.
